CONTROLLER BENEFITS:

ECHO Enhanced Controller (GCA):

Growing hanging baskets has never been easier or more efficient

- Three automatic watering modes add to controller flexibility
- Auto mode (step / stop / water) penetrates canopy for full saturation in one stop
- Ability to incorporate leach time allows the basket to drip in the isle-way, not on the plants below
- Continuous mode allows for quick, efficient irrigation
- Non-stop Spray mode provides each basket with the an even spray pattern when applying chemicals
- Remote switch keeps non-authorized employees from having to touch the controller; minimizing mistakes

Basic Irrigation Controller (BIC):

Simple and basic in functionality

- Only single crop control with skip and park functions
- Very user friendly, needing no previous controller experience
- Works best with Single Rail Boom (SRB)

Network Irrigation Controller (NIC):

Available in two (2) different formats

- A.27 - using magnets to mark crop parameters (jobs)

- Easy to program and use, only moving magnets to change crop parameters
- Remote start function for use with environmental control systems

- EM.6 - using area measurements to mark crops (areas)

- Designed to be versatile and user friendly
- Program crops by inputting their location in the bay
- Enhanced auto programming ability
- Original version of Step-Stop-Water
- Maintain multiple crops under one boom while irrigating each crop individually
- 'Total Control' over crop quality and uniformity
